

Going, Going... Almost Gone

For years, the R22 air conditioning condensing unit change-out has been a profitable part of your business. But as of January 1, 2010, Federal law prohibits the manufacturers of R22 A/C and Heat Pump condensing units from producing them. Inventory has virtually disappeared, and your customers need new alternatives—now.

We are making it a top priority to help you through the ongoing R22 phase out with the following solutions.

You have two great options for replacing R22 condensing units: You can provide a total solution, by replacing the R22 condensing unit with a complete Luxaire or Mitsubishi R410A system, or opt for the more practical, affordable route by simply replacing the compressor.

The Total Solution: R-410A Replacement System.

Installing a new R410A system can net homeowners a big tax credit. We carry the ultra competitively priced Luxaire LX 14.5+ SEER Microchannel and Acclimate 5T and 8T systems, as well as Mitsubishi R410A Inverter Driven ductless systems, including cooling only, heat-pump, multi-zone, hyper heat and ducted systems. Many of these systems qualify for the Federal Consumer Tax Credit of up to \$1,500. In addition, local utility rebates and manufacturer seasonal rebate programs may apply. We also stock a full selection of commercial R410A systems as well.

The Practical Solution: Compressor Replacement.

In the heat of the summer season, many consumers will need a practical, low cost air conditioning solution and they will need it immediately.

This season, all ABCO branches are fully stocked with the industry's widest selection of R22 air conditioning and heat pump compressors, featuring Emerson's line of

Copeland compressors, as well as all of the necessary installation accessories and components.

ABCO understands and is fully prepared to assist you with all of the complexities that come with a compressor field replacement, including BTU selection, mounting and piping. We will cross reference compressors, select all of the necessary components, and quickly build a complete compressor replacement package.

As the R22 phase-out continues, it's our goal at ABCO to do everything we can to help you hit the ground running.

Please contact your local ABCO Branch team or your Sales Account Manager for more information. For all of your HVAC Solutions, call ABCO.
